*The rectangle can be a single piece of fabric cut to the cut size, or a collection of strips that assemble to the cut size.*

*You will need one center square and two rectangles. Each rectangle is cut at a 45 degree angle, with the cut passing through the center of the rectangle.*

*I hope that this chart is useful to you. Thanks to Lorraine Mooney for posting this block in the first place, and I apologize for getting your name wrong the first time I posted this.*
